INTRODUCTION

Voici une bibliographie d'ouvrages choisis, préparée à la demande du Centre de développement des transports, l'un des organisateurs du 9e Congrès international des essieux montés qui doit avoir lieu à Montréal, du 11 au 15 septembre 1988. Ce congrès, qui se réunit tous les trois ans, rassemble tous ceux qui s'intéressent au sujet des essieux montés: fabricants, utilisateurs et chercheurs. Il leur donne l'occasion de procéder à d'utiles échanges d'informations et d'idées au grand bénéfice du transport ferroviaire.

De portée internationale, cette bibliographie renvoie à des ouvrages publiés de 1978 à nos jours ainsi qu'aux communications présentées à l'occasion des trois derniers congrès. Sauf indication contraire, les ouvrages mentionnés sont en langue anglaise.

La bibliographie a été subdivisée en grands thèmes, et un index alphabétique des sujets renvoie aux documents correspondants, au moyen d'un numéro d'ordre.

This selective bibliography was commissioned by the Transportation Development Centre, one of the co-sponsors of the 9th International Wheelset Congress. This triennial congress will be held in Montreal on September 11-15, 1988, and is designed to offer manufacturers, users and researchers in the field of wheelsets an opportunity to exchange technical information that will be beneficial to railway progress.

The bibliography is international in scope and contains works published from 1978 to the present, including the papers from the previous three wheelset congresses. Items are published in English unless otherwise specified.

The document has been sub-divided by subject within the larger area of wheelsets. A more detailed alphabetical subject index provides access to specific citations by item number.
